## **DETAILED ACTION**

### ***Priority***

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Specification***

2. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

### ***Drawings***

3. The drawings are objected to because in figures 3 and 4 the blocks should be labeled in the picture. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the

Art Unit: 2653

examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-2 and 6-7 are rejected under 35 U.S.C. 102(e) as being anticipated by Kuroda (EP 0 930 617).

In regard to claim 1, Kuroda teaches a recording clock signal generating apparatus located in an information recording device for recording information in a recording medium in which a wobbled information recording track and pre-pit formed thereon, said apparatus comprising: a wobble signal detecting section for detecting a wobble signal (fig. 6 element 63); a pre-pit signal detecting section for detecting a pre-pit signal (fig. 6 element 64); a phase comparing section for comparing a phase of said wobble signal to that of said pre-pit signal and outputting the phase difference (see fig. 6 element 70 see also paragraphs 48-50); a phase-shifting section for shifting a phase of said wobbled signal based on said phase difference only when said phase difference is within a predetermined range (fig. 6 element 81 the phase difference must be in a

predetermined range); and a clock signal generating section for generating a recording clock signal based on said phase-shifted wobble signal (fig. 6 element 70).

In regard to claim 2, Kuroda teaches a control section for controlling said phase-sifting section when said phase difference is within a threshold width value set for the phase differences in the past (fig. 6 element 70 see also paragraph 93 lines 2-4).

In regard to claim 6, Kuroda teaches a control unit for controlling said phase-shifting section only when said phase difference is within a fixed width value set relative to the phase difference (fig. 6 element 70 see also paragraph 93 lines 2-4).

Method claim 7 is drawn to the method of using the corresponding apparatus claimed in claim 1. Therefore method claim 7 corresponds to apparatus claim 1 and is rejected for the same reasons of anticipation as used above.

***Allowable Subject Matter***

5. Claims 3-5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is an examiner's statement of reasons for allowance: The prior art fails to teach a phase difference history section for comparing a phase difference to the history.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
